ALEX JOHNSON

<https://www.linkedin.com/in/alex-johnson-example/>

SOFTWARE ENGINEERING STUDENT

PROFILE

Highly motivated **Third-Year Software Engineering student (GPA 9.2/10.0)** at the **School of Electrical Engineering (ETF), University of Belgrade**, specializing in **Data Structures and Algorithms (DSA)** and **System Programming (C/C++, Java, Python)**. Seeking to leverage advanced technical skills and a robust background in low-level systems and application development to contribute high-impact solutions to a challenging and innovative engineering environment. **Strong communication and teamwork skills** developed through university projects.

EDUCATION

University of Belgrade - School of Electrical Engineering (ETF)

- Degree: Bachelor of Science (B.Sc.) in Software Engineering
- Location: Example City
- Expected Graduation: June 2027
- Year of Study: Third Year Student
- Cumulative GPA: 9.2 / 10.0**

Relevant Coursework Highlights:

- Data Structures and Algorithms
- Object-Oriented Programming 1 (C++)
- Object-Oriented Programming 2 (Java)
- Operating Systems
- Database Systems (SQL)
- Computer Networks
- Probability and statistics

PROJECTS

Multithreaded Preemptive Kernel for RISC-V Architecture (C++, C, Assembly)

- Developed a foundational kernel model to demonstrate core OS concepts, focusing heavily on memory management, threads, and low-level hardware interaction.*

Command-Line Interpreter (C++)

- Developed a functional command-line interpreter applying advanced OOP principles in C++, focusing on clean architecture and modular design for command execution and parsing.*

GUI Flight Simulator (Java)

- Developed a visual flight simulator using Java AWT for the GUI, strictly adhering to Object-Oriented Programming principles for clean, scalable design and management of flight data.*

Sudoku & Ludo (Python)

- Developed interactive, fully functional game applications in Python, demonstrating strong capabilities in algorithmic logic design and efficient problem-solving for complex game rules.*

Binary Tree, Fibonacci heap, B* Tree and Graph Algorithms (C/C++)

- Implemented performance-critical algorithms for B* Tree indexing, Binary Search Trees, and Graph theory, utilizing C/C++ to achieve high computational efficiency and optimal algorithmic complexity.*

SKILLS

- | | | | | |
|----------|------------|-------------------|-------------------|------------|
| • C, C++ | • Java | • SQL | • Algorithms | • Git |
| • Python | • Assembly | • Data Structures | • Problem solving | • Networks |
